Five AI perspectives on every pull request

Presented by

Krish Arora | Mayooran Selliah | Shiven Chappidi | Nico Brooks

One diff. Five perspectives.

- Security, Performance, Compatibility, Quality and Product review independently, then challenge each other's claims.
- Upload or paste a diff, or load a GitHub PR. Get a tradeoff map: resolved issues, remaining disagreements and decisions for a human.

Debate you can inspect

See every role's position and confidence.

Open the reasoning and peer references.

End with a tradeoff map.

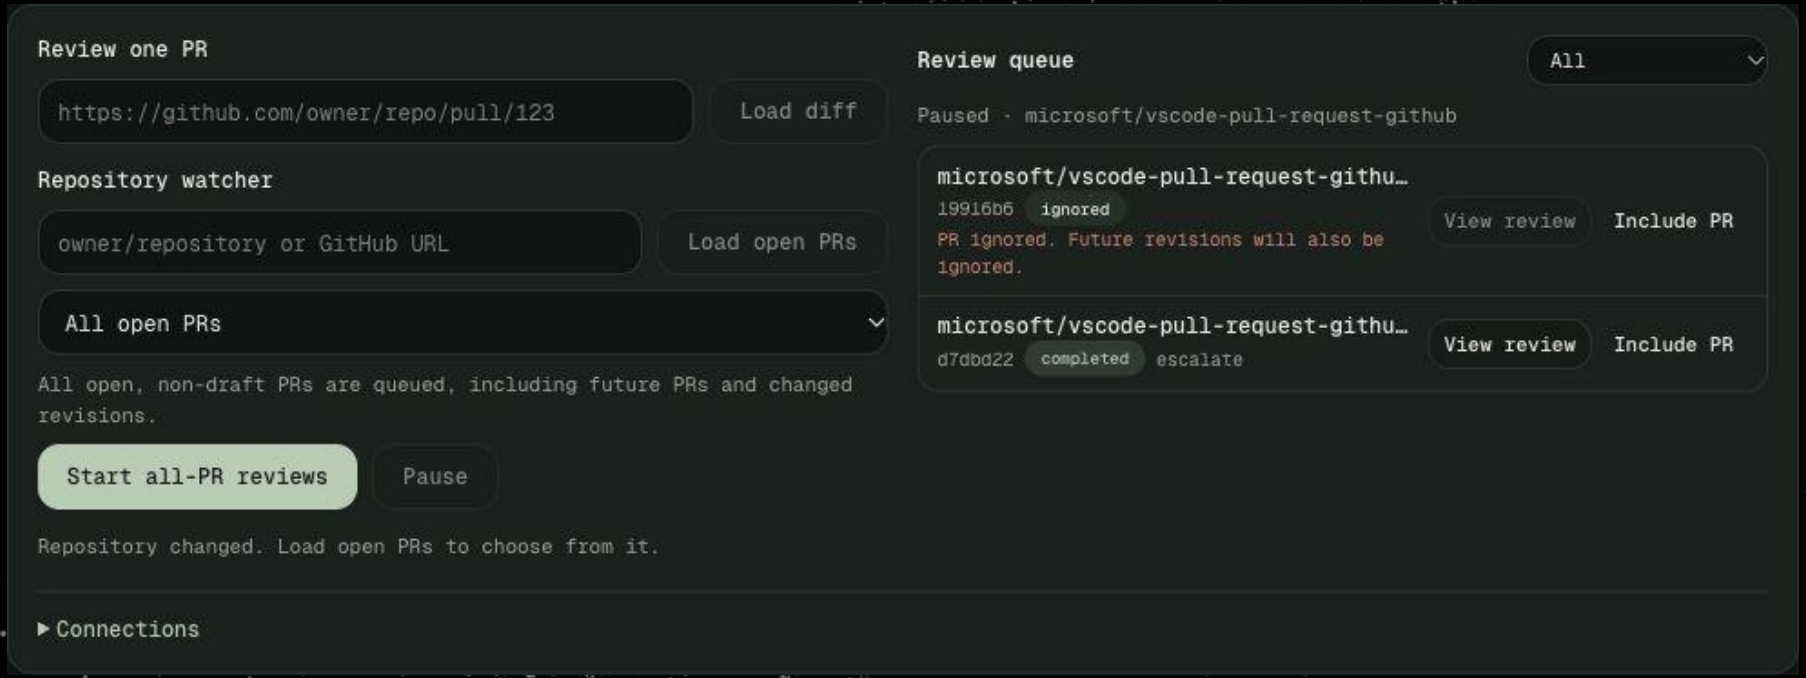

Actual saved review · microsoft/vscode-pull-request-github #9050

Built for real debate

- React + FastAPI + WebSockets show the review. Cisco AGNTCY SLIM carries typed messages between the council participants.
- An Ollama endpoint on NVIDIA Brev powers the agents. Code validates identities and peer references; a judge evaluates the debate and critical security issues go to a human.

Review your GitHub PRs

Load one PR, or watch a repository. Save transcripts and skip unchanged revisions.

Next: prove the benefit

- Built and tested: the complete council over real SLIM transport, a saved review queue and eight reverted open-source PRs prepared for evaluation.
- Next: compare against a single-reviewer baseline, measure useful findings and latency, and improve the distributed agent experience.
